

EMSAT™ provides software solutions to meet real-time environmental data monitoring challenges of today's industry. The **EMSAT software** is a powerful data aggregation, visualization and management platform that leverages sensor and live computing technologies to deliver accurate **Real-Time Environmental Monitoring Solutions**.

Live.

Delivers continuous, real-time environmental feedback via custom interfaces with instant warnings and alerts to improve responsiveness and reduce risk.

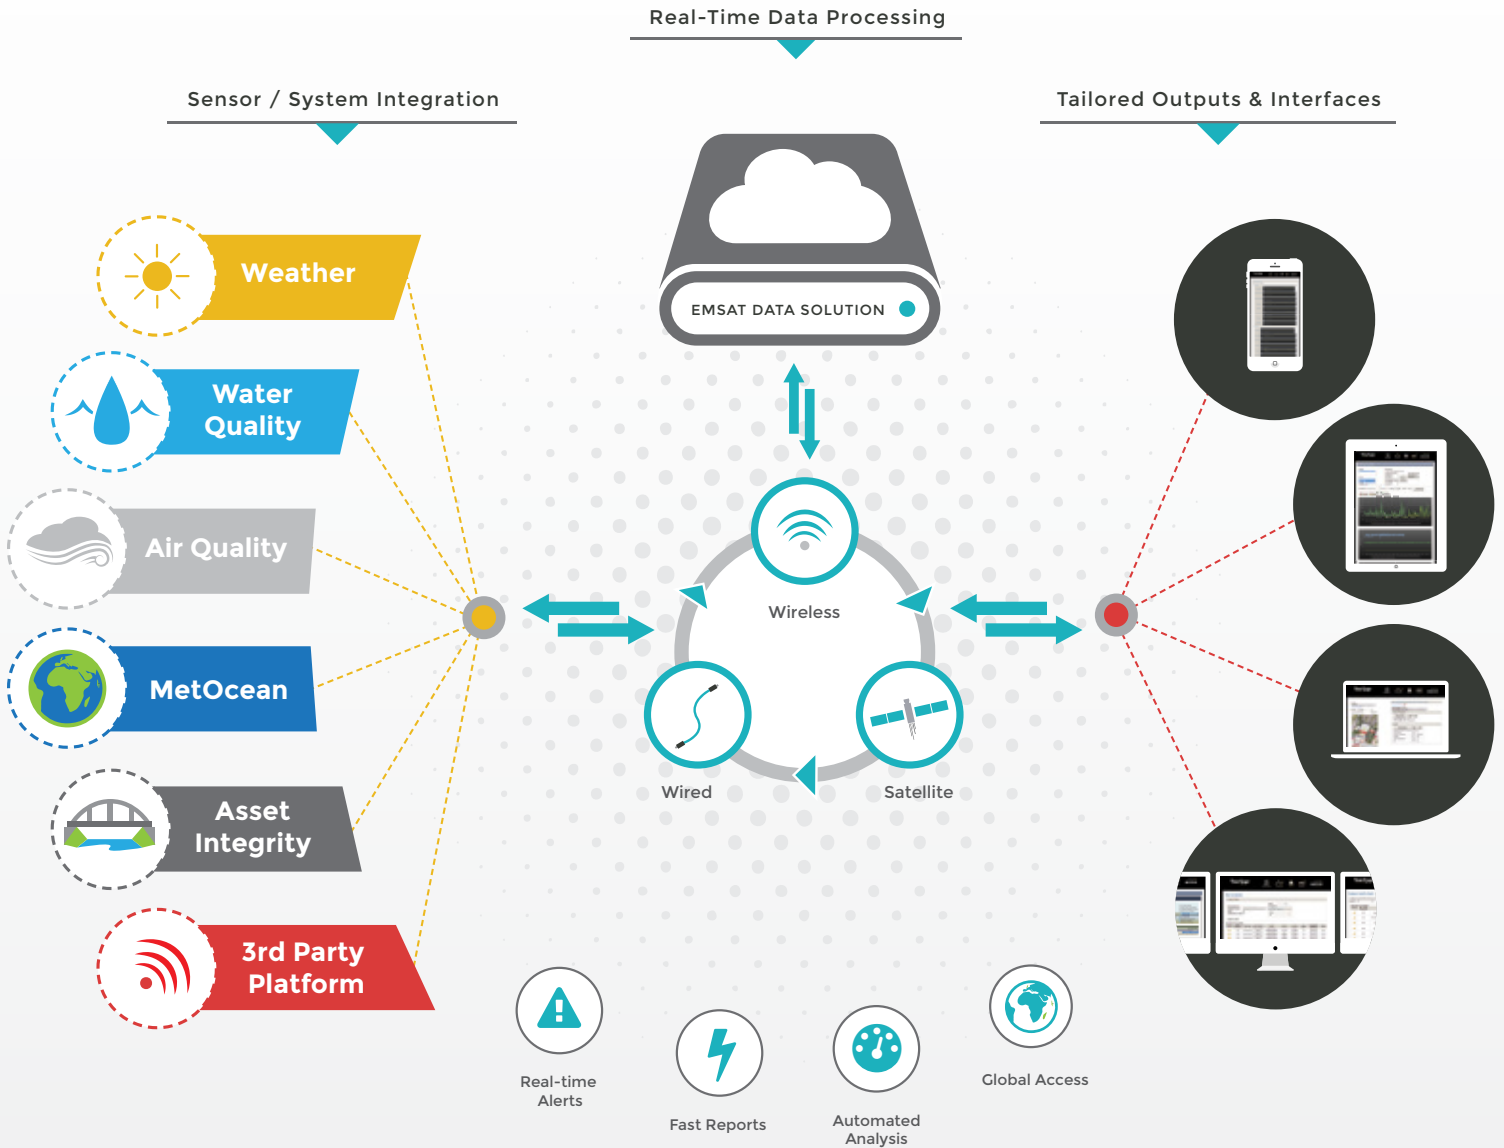

Streamlined.

Increases efficiency by centralizing the acquisition and real-time processing of monitoring data to ensure regulatory compliance and reduce cost.

Tailored.

Converts environmental data into graphical, actionable information to improve decision-making, demonstrate stewardship and facilitate automated reporting.

The **EMSAT solution** may be applied in a broad range of real-time monitoring applications including the oil and gas industry; the mining industry; asset integrity (pipelines and bridges) monitoring; climate change, air and water quality assessments; coastal monitoring and management.

KEY FEATURES:

- » Custom Real-Time Communication
- » Powerful Data Aggregation & Analytics
- » Automated Compliance Monitoring
- » Instant Warnings & Alerts
- » Personalized Dashboards & User Interfaces
- » Tailored, Accurate, & Fast Reporting Tools
- » Global Access via Web or Mobile Device
- » Secure, Cloud-Based SaaS Solution
